

The Ethical Investor Fund Finder Database

Our Fund Finder is a proprietary database of investment funds that are open to retail investors in the UK, and that have an explicit or implicit focus towards ethical/ responsible/ sustainable (etc.) investment, either through their approach and/or through the companies and assets they invest into.

All investments in the database can be accessed by retail investors in the UK, but may not be available on all investment platforms.

The process for identifying funds within the database is as follows:

- Funds must either:
 - Have an investment approach that explicitly factors in ethical or responsible considerations, for example avoiding certain harmful sectors like tobacco, or tilts towards companies with above average ESG profiles
 - Invest into certain sectors that by their nature are likely to contribute to a more sustainable and equitable world, for example investing into renewable energy
- We then search applicable investment funds by searching funds on offer on investment platforms in the UK (e.g. general investment accounts, ISAs, pension accounts etc.), and other means such as trade press

All classifications on the website (e.g. Impact Theme, Sustainability Approach, Ethical Exclusions) are personal judgements and not those made by the investment fund themselves. Some data (e.g. MSCI ESG Manager, Carbon Intensity, Green & Brown Revenues) are sourced from publicly available data provided by MSCI.

If you have views on the information provided, either in general or on specific funds that are/ are not included in the database, please get in touch.
